02 / COPY, RUN, CHECK

Exact live prompts

Select and copy the prompt text, or use the Copy buttons in the online guide.

Open the online rehearsal guide

Opening hook

Turn these client enquiry notes into a three-line WhatsApp acknowledgement for Safi Services & Supplies. Keep KES 120,000 as the client's monthly budget, not our quote. Treat 16 November 2026 as a requested start date, subject to confirming scope and availability. Ask to confirm window count, size and height. Do not promise a price or start date.

Parklands Learning Centre; 400 m²; cleaning Monday, Wednesday and Friday after 6 pm; monthly window cleaning; budget 120k including tax; wants start 16 Nov. Window details missing.

OPENING CHECK

The budget remains a budget. The requested date stays conditional. Window count, size and height are requested.

01 / ChatGPT

Sales replies & a week of marketing

Safi Services & Supplies cleans offices and sells cleaning products in Nairobi. Parklands Learning Centre has asked about a three-month contract. The owner needs to move that enquiry forward and attract other suitable enquiries without spending every evening writing.

THE BUSINESS DECISION

Is the reply accurate enough to send? Does each post help the intended customer take a useful next step?

Main prompt

You manage enquiries for Safi Services & Supplies, a Nairobi cleaning company that also sells cleaning supplies. Using only the notes below, draft an email of no more than 180 words to the administrator of Parklands Learning Centre. Use five short sections: Your needs; Proposed next step; Timing; Budget; What we need from you. Keep the language simple and professional. KES 120,000 is the client's monthly budget inclusive of tax, not our quote. A costed proposal follows scope and access checks. Treat 16 November 2026 as a requested start date, subject to confirming scope and availability. Do not invent prices, discounts, certifications or staffing. Do not mention the administrator's possible home-cleaning request in the customer-facing email; note it only in internal checks as a separate enquiry. After the email, add a separate 'Internal checks - remove before sending' section. List missing facts and assumptions there, not inside the customer-facing email.

Client enquiry: Parklands Learning Centre, 400 m² offices. Cleaning Mon/Wed/Fri after 6 pm. Floors, desks, washrooms, waste to on-site collection point. We provide products, equipment and staff. Wants windows monthly too; count, size, height and safe access unknown. Budget 120k per month incl tax. Requested start 16 Nov 2026 for 3 months. Admin also mentioned maybe cleaning her home later. No availability or final quote confirmed.

Follow-up prompt

Turn only the customer-facing email into a three-line WhatsApp reply. Keep KES 120,000 as the client's budget, keep the requested start date subject to confirmation, and ask for the missing window details. Do not include internal notes or the separate home-cleaning request.

Check the output

- KES 120,000 remains a monthly budget inclusive of tax, not a quote.
- 16 November remains a requested date, subject to confirmation.
- Window details are requested; the separate home job is excluded.

01 / Sales & marketing - part two

Now bring in the next enquiry.

A reply helps with a lead you already have. Marketing gives the next customer a reason to contact you. Start with one service and the questions that customer is already asking.

Weekly marketing prompt

You help Safi Services & Supplies plan practical marketing for its Nairobi office-cleaning service.

Campaign brief:
- Audience: office managers and administrators in Parklands, Nairobi.
- Goal: aim for three qualified cleaning enquiries in the week starting 2 November 2026. This is a target, not a forecast or guarantee.
- For this campaign, qualified means the person gives an office location, approximate floor area and preferred cleaning schedule.
- Approved facts: we clean office floors, desks and washrooms and move waste to the on-site collection point. We supply staff, products and equipment. Window work needs its own scope and safe-access check. Price and start date follow scope and availability checks.
- Common questions: What is included? Can cleaning fit around working hours? What information is needed for a quote?
- Channels for this small experiment: Instagram and our own WhatsApp Status. Do not send direct messages to anyone.
- Next step: invite people to DM the word OFFICE with their location, approximate floor area and preferred schedule.
- Voice: clear, warm and specific. Avoid hype, jargon and phrases such as "transform your space".

Make a three-post plan for Monday, Wednesday and Friday. Give each post a different job: answer a useful question; explain how we plan the work; invite an enquiry. For each, give the day, channel, opening line, main point, simple photo or graphic idea, and call to action. Then write Monday's Instagram caption in 60-90 words and a WhatsApp Status version of no more than 30 words. Put those finished words in separate sections.

Do not reuse private client details from this chat. Do not name Parklands Learning Centre, publish its budget or imply it is our customer. Do not invent testimonials, before-and-after results, discounts, certifications, prices, availability, contact numbers or images we do not have. Suggest an image to capture, not an asset that already exists.

End with a short publishing check and a simple tracking row: post, enquiries, qualified enquiries, site visits agreed, quotes requested. Review actual results after seven days; do not fabricate results or promise sales. Draft only; do not publish or schedule anything.

Publishing checks

- The post is useful to an office manager, rather than a generic “we are the best” advert.
- There is one clear next step, and no private client details or invented proof.
- Use your own or authorised image; check text size on a phone and describe the actual visual in alt text.
- Three enquiries is our target. Leave results blank until there are real enquiries.

01 / Optional follow-ups

Keep these for the next job.

Use one follow-up when the work calls for it. These are take-home options; the live segment protects time for the marketing example and participant practice.

Shorten without losing the point

Make the customer-facing email 40% shorter. Keep the budget, conditional start date and missing window details. Keep internal checks separate.

Handle a price objection

The client asks whether the eventual quote could cost less. Draft a warm reply offering two scope choices to discuss: fewer cleaning visits, or windows priced separately. Explain the trade-off for each. Do not promise a discount, final price or that either option fits the budget. Ask which option they would like us to cost.

Turn a post into a simple graphic

Turn Monday's post into a simple graphic I can assemble in Canva. Give me a headline of at most six words, one supporting sentence, a short DM call to action and an image direction. Keep the caption separate. Add plain-language alt text for the proposed visual, to update after I choose the actual image. Use only the approved facts; do not invent a testimonial or discount.

Keep the process

Next Monday: reopen the same kit, update the service or customer question, run the marketing prompt and review one post before publishing.

02 / NotebookLM

An answer you can trace

Parklands Learning Centre sends a formal RFQ. Safi must decide whether it can submit a complete bid on time and whether the window work can be priced responsibly. A missed requirement could waste the effort put into the proposal.

> **THE BUSINESS DECISION**
>
> Can we bid, what is missing, and who must supply it before the submission deadline?

Before starting: select only 03-cleaning-rfq.pdf in your notebook.

Main prompt

Using only the selected RFQ, make a compact bidder checklist of no more than 300 words. Use three sections:
1. Requirements: list the six mandatory submission items, the budget ceiling, submission deadline and format, and the optional site visit. Give a supporting citation and section identifier for each row.
2. Explicit rejection grounds: list only the four grounds actually stated in Section 5.
3. Before quoting: list the three most useful clarification questions.
Do not infer extra mandatory conditions. Mark absent details "Not specified in the source". In particular, do not call insurance or minimum staffing mandatory: neither is specified. Distinguish the optional site-visit date from the submission deadline. Do not invent window measurements or a tax rate.

Follow-up prompt

How many windows are there, what size are they, and can our team clean all of them safely from ground level? Cite any supporting passage. If the RFQ does not establish an answer, say so and draft one short clarification question.

Turn the answer into work

Using only the verified checklist, make a bid-preparation table: task, source section, document needed, owner and internal due date. Leave owner and internal due date blank for us to fill. Keep the published submission deadline separate. Flag unresolved questions; do not mark anything complete.

Compare suppliers after uploading both quotes

After I upload two supplier quotations, compare only equivalent items needed for this RFQ. Show specification, pack size, quantity, unit price, tax basis, delivery and source citation. Mark missing or incomparable terms. Do not recommend the cheapest supplier until scope and total delivered cost are comparable.

Check the output

- Submission closes 6 November at 12:00 noon EAT.
- The site visit is optional.
- Window count, size and height are not specified.

Save the reusable routine and template

03 / ChatGPT

What is your stock saying?

Safi has a 30-day sales sheet and needs to choose what to replenish. Some products sell quickly; others hold cash on the shelf. A high selling price alone does not tell us which line contributes the most profit.

THE BUSINESS DECISION

What should we investigate, count or price with the supplier before spending money on stock?

Main prompt

Act as a retail operations analyst explaining Safi Services & Supplies' product sales to its owner. Use a calculation/data-analysis tool if available and tell me if it is not available. Analyse the following 30-day sales report.

Assume no restocking, returns, shrinkage, price changes or stockouts during the 30 days. Assume the next 30 days have the same demand, instant delivery and no safety stock. Costs and sales prices use the same simplified tax basis.

Calculate per product:
1. Revenue = units sold × selling price.
2. Gross profit = units sold × (selling price - unit cost).
3. Closing stock = opening stock - units sold.
4. Sell-through percentage = units sold / opening stock × 100.
5. Top-up quantity = max(0, units sold - closing stock).

Give one table and the total revenue, cost of goods sold and gross profit. Rank the top three products by total gross-profit contribution. Define slow-moving as lowest sell-through percentage and name the bottom three, noting ties. Explain the next actions in no more than five bullets. Show the formulas and the worked calculation for multipurpose cleaner and floor cleaner. State that overheads are absent, so net profit cannot be determined. State which real-world information is missing before a purchasing decision.

Product,Opening stock,Units sold (30 days),Unit cost KES,Selling price KES
Multipurpose cleaner 2L,120,95,310,380
Floor cleaner 5L,80,70,720,850
Hand soap 1L,150,40,260,300
Laundry soap bar,200,35,45,60
Bleach 1L,100,88,170,210
Microfibre pack,60,12,350,480
Toilet paper 10 pack,90,82,380,450
Bin liner box,40,8,900,1100

03 / Follow-ups and checks

Take the next step.

Keep a master spreadsheet, a saved analysis prompt and a short record of the decision you made.

Follow-up prompt

Create a horizontal bar chart of total gross-profit contribution by product, sorted from largest to smallest. Label values in KES and use the title "Gross profit from units sold - 30-day sales". Explain in two sentences why a high margin percentage need not mean the most total profit.

Turn numbers into a buying conversation

Using the checked table, prepare a purchasing review. Separate calculated top-up quantities from decisions needing current stock, lead time, demand and cash. For the slowest mover, suggest two actions to investigate and their trade-offs. Do not place an order or invent supplier terms.

Check the output

- Revenue: KES 179,640. Gross profit: KES 30,295.
- Floor cleaner contributes the most gross profit: KES 9,100.
- Overheads are absent. Net profit cannot be determined.

04 / Codex

A small tool, built for you

After checking the RFQ and stock, Safi needs a consistent monthly cleaning estimate. Re-entering a formula for every prospect invites mistakes, especially when someone changes the area or number of visits on a phone.

THE BUSINESS DECISION

Does it follow the rules, and are scope, rates and availability confirmed before a quotation goes out?

Main prompt

Build and test a working, phone-friendly cleaning quote calculator in this demo folder. Deliver a self-contained quote-calculator.html file with its CSS and JavaScript included. It must work offline with no external libraries, images, fonts, services or network requests. Create the actual file, perform the checks below using the tools available to you, and open or link the working result for review. If an interactive HTML preview is available, show it too.

Business rules:
- Floor area in square metres must be a finite number greater than zero.
- Visits per week: choose 1, 3 or 5.
- Windows: yes or no.
- Use exactly 52 / 12 weeks per month to estimate average monthly visits.
- Cleaning price: KES 18 per square metre per visit.
- Windows: a fixed KES 6,000 per month when selected.
- Subtotal = area × 18 × visits per week × 52 / 12 + windows fee.
- Apply an assumed 16% VAT to the entire subtotal, including windows.
- Total = subtotal + VAT.
- Retain full precision during calculation; display currency to two decimals.

Show area, average visits per month, cleaning amount, windows amount, subtotal, VAT and grand total, all clearly labelled. Explain that 52/12 is an average estimate; actual calendar visits may differ. State the rates and tax assumption used; confirm them before issuing a quotation. Default to 400 square metres, 3 visits per week and windows included. This matches our RFQ; do not claim it is a final commercial quote. For invalid or missing area input, show a helpful error and no valid quote. Use large text, clear form labels and a professional design.

Verify these cases before delivering the file:
100 m2, 3 visits/week, windows yes: subtotal KES 29,400; VAT KES 4,704;
grand total KES 34,104.
100 m2, 3 visits/week, windows no: grand total KES 27,144.
400 m2, 3 visits/week, windows yes: grand total KES 115,536.
Blank, zero, negative and non-numeric area: validation error, no valid quote.
Test the actual implemented calculation logic, not just a separate copy of the formula. If browser tools are available, also check the form controls, invalid inputs and a narrow phone viewport. Report which checks you actually performed and any you could not perform. Give a brief delivery summary and the path to the finished file. Do not publish or deploy it.

04 / Follow-ups and checks

Take the next step.

Keep one approved copy and a note of its rates. Everyday use means opening it; changes to the rules get a separate review.

Follow-up prompt

Add a "Print estimate" button. The print view must retain the inputs, amount breakdown and calculation assumptions. Preserve every calculation rule and rerun the same checks.

Ask for a plain-language handover

Write a short owner's guide: how to open the calculator, what each input means, where its rates are shown, how to request a rate change and which examples to check afterwards. Explain that sharing a local file differs from publishing a website. Use language for someone who does not write code.

Check the output

- 100 m², 3 visits/week, windows: KES 34,104.
- 400 m², 3 visits/week, windows: KES 115,536.
- Missing or invalid floor area produces an error, not a valid quote.
