11 / KEEP IT. USE IT AGAIN.

Four routines to keep.

Start with a document, notebook, spreadsheet or checked tool you can reopen. These starter routines use the same habits: clear inputs, saved instructions, review, ownership and a record of what happened.

Routine	Keep this	Use again
Your Sales & Content Kit	Business brief + two prompts + weekly planner	Each enquiry; one 20-minute marketing review each week
Your RFQ Review Folder	Current source + checked bid checklist	When an RFQ or an official update arrives
Your Monthly Stock Review	Master spreadsheet + checked results + decision log	Monthly, or before the regular stock order
Your Saved Estimate Calculator	Approved calculator + rate card + known checks	Each estimate; review whenever rates or rules change

A SIMPLE PLACE TO START

Use the app you already know. A Google Doc, Word file or phone note can hold a reusable prompt. Bookmark the file so you can find it. Give one person responsibility for updating the facts and reviewing the result.

Copy the editable templates from the demo pages

01 / Keep and reuse

Your Sales & Content Kit

Keep one short business brief and two saved prompts. Reuse the instructions; replace the client notes or weekly campaign details each time.

Set up: 15 minutes once | Use again: Each enquiry; one 20-minute marketing review each week

Owner: The owner or the person responsible for customer enquiries

1. Create one home for it

Create a Google Doc, Word document or phone note called “Safi - Sales & Content Kit”. Save the template below, both prompts and one reply you like. Bookmark the document on your phone.

2. Write down the facts once

Add services, service area, tone, approved contact details, what is included and what needs a quote. Add a last-reviewed date. Keep private client notes out of this shared business brief.

3. Use a fresh brief each time

Copy the instructions into a new chat with this enquiry’s notes or this week’s campaign details. If you use a ChatGPT Project, keep the approved brief in its files/instructions and start a separate chat for each client or campaign.

4. Review and publish deliberately

Check prices, dates, promises, spelling and the image. Remove internal notes from replies. Copy approved posts to your usual app yourself; use a simple Canva layout if you need a graphic.

5. Keep the result and learn

Save approved work in the same folder. Use the planner to note enquiries and next steps. Once a week, keep what brought useful conversations and revise one weak post.

01 / Your editable master

Save this template.

Replace the square brackets with your own details. Keep the master and make a dated copy for each new piece of work.

SALES & CONTENT KIT
Owner: [name] | Last reviewed: [date]
Business / service area: [facts]
Services and inclusions: [approved facts]
Prices / dates that require confirmation: [rules]
Voice: [three words and one approved example]
Approved contact / next step: [details]
Never invent: prices, availability, testimonials or credentials.

FOR EACH ENQUIRY
New client notes: [paste authorised notes here]
Task: draft a short reply that acknowledges needs, asks for missing facts and gives a next step. Keep budget separate from our price. Put internal checks after the reply.
Review before sending: names, scope, budget, dates, promises; remove internal notes.

FOR EACH WEEK OF MARKETING
Week: [date] | Audience: [specific customer] | Service: [one offer]
Customer question: [one real question, without personal details]
Approved facts / proof we may use: [facts and authorised assets]
Channel: [where our customers already hear from us]
One call to action: [what the reader should do]
Goal: [target, not a forecast]
Task: draft three distinct post ideas and one finished caption. Suggest a visual. Use only these facts; do not publish anything.
Record after publishing: enquiries, qualified enquiries, site visits agreed, quotes requested.
Review after seven days: [what happened / one change for next week]

Your next run

Next Monday: reopen the same kit, update the service or customer question, run the marketing prompt and review one post before publishing.

How to tell if it helps

Track drafting time and edits for replies; track qualified enquiries, site visits and quote requests for posts.

02 / Keep and reuse

Your RFQ Review Folder

One notebook per opportunity, one checklist to act on. Keep source evidence separate from your decisions.

Set up: 10 minutes once | Use again: When an RFQ or an official update arrives

Owner: The person coordinating the bid

1. Name the opportunity

Create a NotebookLM notebook called “PLC - RFQ-2026-001”. Keep the original PDF in a folder with the same name. Bookmark the notebook and folder.

2. Keep sources current

Upload the current RFQ. Add official clarifications with dates and select relevant sources. For a revised uploaded PDF, replace the outdated source. Verify the active version; an old generated answer does not update itself.

3. Save a checked checklist

Run the checklist prompt. Open key citations. Copy the checked table into a Google Doc or Sheet named “Bid checklist”. Add owner, internal due date and status yourself.

4. Reopen it at the next check-in

Resolve each missing document or question and record the supporting source section. Recheck changed clauses after an addendum.

5. Make a human bid decision

Have the responsible person review the final documents against the current RFQ. Share only with people who need access. Start a new notebook for the next opportunity.

02 / Your editable master

Save this template.

Replace the square brackets with your own details. Keep the master and make a dated copy for each new piece of work.

RFQ REVIEW
Opportunity / reference: [name]
Source filename and issue date: [current version]
Official updates included: [list or none]
Published submission deadline and format: [verify in source]

SAVED QUESTION
Using only the selected current sources, list mandatory requirements, explicit rejection grounds, deadlines and missing information. Cite the supporting section for each. Distinguish required from optional. Say "not specified" where the source is silent.

WORKING CHECKLIST
Requirement | Source section | Document needed | Owner | Internal due date | Status
[Fill after checking the source]

DECISION LOG
Question still open: [question]
Who will resolve it: [name]
Latest check: [date]
Bid / wait / decline: [human decision and reason]
Final reviewer: [name]

Your next run

When an addendum arrives, update the selected sources, rerun affected questions and review the checklist again.

How to tell if it helps

Count unresolved requirements and minutes spent finding evidence. Does the checklist help produce a complete submission?

Google: selecting and updating notebook sources

03 / Keep and reuse

Your Monthly Stock Review

Keep a master spreadsheet, a saved analysis prompt and a short record of the decision you made.

Set up: 15 minutes once | Use again: Monthly, or before the regular stock order

Owner: The owner or stock controller

1. Save a clean master

Create “Stock review - master” in your spreadsheet app. Keep product, opening stock, units sold, unit cost and selling price in separate columns. Include reporting dates and units.

2. Make a dated copy

Duplicate it for each period and enter new data. Keep the original export unchanged. Check missing values, duplicates and consistent tax treatment for costs and prices.

3. Run the same analysis

Use a fresh chat and the saved prompt with the new file. Change assumptions if there were restocks, returns or price changes; the workshop’s simple closing-stock formula will not cover those.

4. Check before deciding

Compare totals with the source report and check two product calculations independently. Investigate mismatches. Add lead times, cash and demand before agreeing an order.

5. Keep a decision log

Save the checked table beside the source. Write “buy / wait / investigate”, the reason, approver and review date. Bookmark the folder for next month.

03 / Your editable master

Save this template.

Replace the square brackets with your own details. Keep the master and make a dated copy for each new piece of work.

MONTHLY STOCK REVIEW
Period: [start/end] | Owner: [name] | Source file: [filename]
Currency and unit: [KES / item / pack]
Restocks, returns, shrinkage, stockouts or price changes: [details]

SAVED QUESTION
Analyse the attached period. Calculate revenue, cost of units sold and gross profit. Show formulas and totals. Rank total gross-profit contribution and slow-moving stock using a stated measure. Show two worked rows. Flag missing information and ask where the data cannot support a calculation. Do not infer net profit without overheads or a final order without buying constraints.

REVIEW
Source totals match: [yes/no; explain differences]
Two rows independently checked: [products and results]
Current stock / lead time / cash / expected demand: [verified facts]
Decision: [buy / wait / investigate]
Reason, approver and review date: [details]

Your next run

Duplicate the master, replace period-specific values and compare the new result with the previous decision.

How to tell if it helps

Track review time, corrected data errors and actual stock outcomes. Compare suggestions with what happened.

04 / Keep and reuse

Your Saved Estimate Calculator

Keep one approved copy and a note of its rates. Everyday use means opening it; changes to the rules get a separate review.

Set up: 10 minutes after the file is checked | Use again: Each estimate; review whenever rates or rules change

Owner: The person authorised to maintain pricing

1. Keep the approved copy

Download the checked HTML file into “Safi - Estimate calculator”. Open it in a desktop browser and keep a backup. For today’s phone example, bookmark the “Try the quote calculator” link.

2. Write a short rate card

Keep the area rate, windows charge, visits rule, tax assumption, owner and review date beside it. Replace workshop assumptions only with rules your business has approved.

3. Run three quick checks

Try a known estimate, change one option and leave area blank. Confirm totals and the error. After any change, repeat all supplied checks before using the new copy.

4. Make access easy

On a desktop, bookmark the opened file. For a team or phone link to your own version, ask the person helping with setup to publish the reviewed calculator and test the URL. A local file is not automatically a shared website.

5. Update through the same brief

When pricing changes, give Codex the approved rules and request a new version with tests and a delivery summary. Keep the old copy dated until the new one is checked.

04 / Your editable master

Save this template.

Replace the square brackets with your own details. Keep the master and make a dated copy for each new piece of work.

CALCULATOR HANDOVER
Approved file / link: [location]
Owner: [name] | Version / review date: [date]
Purpose: [what it estimates]
Approved rates and assumptions: [list]
Inputs that change per enquiry: [list]

BEFORE USE
Open a known example and check the total.
Enter the new inputs; review every line.
Confirm scope, availability and applicable tax before a quote.

WHEN A RULE CHANGES - ASK CODEX
Update this calculator using only the approved rules below. Preserve other behaviour. Test the actual calculation and invalid inputs. Report which tests ran, deliver the working file and explain how to open it. Do not publish it.
New approved rules: [details]
Known expected answers: [examples]

Release check: [reviewer, date and version approved]

Your next run

Reopen the approved copy, enter this enquiry's inputs, check the breakdown and resolve site details before preparing a quotation.

How to tell if it helps

Track estimating time and corrections. Confirm a colleague can open it and reproduce a known answer without help.

Marketing / A worked example

A week with a purpose.

Audience: office managers in Parklands. Offer: office cleaning, scoped before pricing. Goal: aim for three qualified enquiries in seven days; this is a target, not a forecast.

For this experiment, qualified means the prospect provides location, approximate office area and preferred cleaning schedule.

Day / job	Post idea	Visual to prepare
Mon · 2 Nov / Answer a question	What should an office-cleaning enquiry include?	A simple checklist graphic
Wed · 4 Nov / Explain the process	Working around office hours starts with an access plan.	Your own photo of prepared equipment; no client details
Fri · 6 Nov / Invite a conversation	Planning regular office cleaning? Start with the scope.	A clear service checklist

One next step

DM OFFICE with location, approximate floor area and preferred schedule.

Monday - Instagram caption

Planning office cleaning in Parklands? A useful quote starts with a few details: your location, approximate floor area and preferred cleaning days and times. Safi Services & Supplies handles office floors, desks, washrooms and waste to your on-site collection point, with staff, products and equipment included. Need windows cleaned too? We'll confirm the scope and safe access first. DM OFFICE with those three details. We'll discuss the scope and availability before confirming a price or start date.

WhatsApp Status

Office cleaning in Parklands? Message OFFICE with your location, approximate floor area and preferred schedule. We'll confirm scope and availability before pricing.

Marketing / Publish and learn

Keep the results honest.

Before publishing

- The post is useful to an office manager, rather than a generic “we are the best” advert.
- There is one clear next step, and no private client details or invented proof.
- Use your own or authorised image; check text size on a phone and describe the actual visual in alt text.
- Three enquiries is our target. Leave results blank until there are real enquiries.

A simple visual brief

Headline: What helps us quote?
Supporting line: Share your office location, floor area and preferred cleaning times.
Call to action: DM OFFICE to start.
Visual: a clear three-item checklist with readable text, using your approved logo and colours.
Suggested alt text: Checklist asking for office location, floor area and preferred cleaning times. Update it to describe the actual finished visual.

A 20-minute weekly routine

5 minutes: review last week’s real enquiries and choose one question.
10 minutes: update the brief, draft three ideas and finish one caption.
5 minutes: review the facts and visual, approve the next post and record the owner.

Track conversations through to the next step

After posting, record enquiries, qualified enquiries, site visits agreed and quotes requested. Ask where the prospect heard about you; do not assume every enquiry came from a post. Compare actual results after seven days. Low volume is a reason to learn, not proof a channel has failed.
