08 / WORKSHOP REFERENCE

Rehearsal & implementation review

31 October 2026. A record of checks actually performed and the limits of those checks.

Assessment

The revised material passes the content, arithmetic, local-workflow and visual checks listed below for a guided introductory workshop. A full 60-minute spoken dress rehearsal, venue Wi-Fi and projector checks have not been performed. No connected external email/CRM automation has been installed. The Codex fallback was built and tested during preparation; a fresh on-stage Codex build is still a live run, not guaranteed by these checks.

Promotion Fit

Practical everyday work: pass. One cleaning-and-supplies company now links enquiry, reply, RFQ, stock and estimate.

Automation emphasis: pass for an introductory demonstration. Four minutes of a working local workflow and six minutes designing an attendee workflow. The browser demo uses rules and a template; it does not call AI or send email. Do not advertise it as a completed cross-app automation setup.

A new perspective: pass in the design. The opening is a useful reply; the close connects brief, source, calculation and human review into repeatable work. Whether the audience experiences that shift must be observed in the room.

Paid-session value: concrete outputs are a checked reply, a three-post marketing plan, four reusable routines, a five-field workflow plan, exact reusable prompts, 14 task guides, checked data, an offline calculator and the deck. Protect the participant practice; do not replace it with tool introductions.

Observed Product Rehearsal

ChatGPT opening: produced three short paragraphs; retained budget and conditional date; asked for windows.

Client email, first run: mentioned the separate home enquiry. Revised prompt explicitly excludes it from the customer email. Retest produced a 156-word email with five requested sections, no home job and a separate internal checklist. WhatsApp follow-up also passed the three content checks.

Weekly marketing: the complete prompt produced three distinct post plans, a finished Instagram caption, a short WhatsApp Status, a publishing checklist and blank tracking fields. The three-enquiry goal was labelled a target. No private client name or budget appeared in the public copy. Human edit needed: “waste collection points” in the Status was less precise than moving waste to the on-site collection point. The prepared website caption and Status use the approved facts. A first input attempt submitted only the opening sentence; submitting the full brief recovered the demo. This verifies one response, not future reliability or campaign results.

NotebookLM / Gemini Notebook: RFQ uploaded to a new rehearsal notebook as the only selected source. Initial response used the ambiguous phrase “mandatory insurance coverage” among unspecified details. Revised prompt removed that inference. Deadline and optional visit checked. Opened the deadline citation and the missing-windows citation; supporting source text was visible. Follow-up correctly declined to invent window measurements or safe ground-level access. Output can exceed a requested word limit; inspect the key answers rather than reading the whole checklist aloud.

Stock: a fresh ChatGPT conversation repeatedly showed “This response couldn’t load”, including a retry and an alternative mode. The full exact prompt subsequently succeeded in the working rehearsal conversation. All eight rows, totals, top three, slow movers and top-ups match the independent key. The response claimed Python use; that sentence alone is not proof of tool execution. Present the independently checked numbers, and only claim tool execution if its trace is visible. Keep the successful prepared chat and offline key ready. This is a passed content check with observed live-service instability, not a reliability guarantee.

Codex: the preparation session built quote-calculator.html as a genuine standalone file. Its actual embedded function was tested against known totals and invalid inputs. The browser controls were checked at 320px: 100m²/windows=34,104; no windows=27,144; blank input=no quote; default400m²/windows=115,536. The file has no external libraries or assets.

Implementation Review And Fixes

• Replaced unrelated interior-design/grocery examples with one cleaning business.

• Replaced stale run-sheet statements and old local-only sharing advice.

• Moved automation to the opening and protected audience exercises.

• Fixed raw Markdown headings discovered in the exported PDF; visually reviewed the updated 33-slide PDF after correction.

• Updated stock-chart labels and accessible description to match the new products.

• Added four alternative-tool tags to each demo and task-specific comparisons.

• Added searchable/filterable directory: 14 tasks, 24 tools; first-party sources and setup considerations. Recommendations are editorial fit judgments, not benchmark rankings or universal “best” claims.

• Collapsed research-method detail on phones so search is easy to reach.

• Corrected the workflow to resolve missing details on the same enquiry ID, not create a replacement enquiry.

• Verified hold, duplicate rejection, clarification, deliberate approval and one-record preservation in the UI. Nothing is sent externally.

• Verified workflow-plan saving and restoration after page navigation; intake records reset on refresh as labelled.

• Checked 320px, 390px and 1280px layouts, prompt copying, directory search, category filter and empty state. No horizontal page overflow observed in tested views. Phone portrait remains illustrated-only.

• Added business context and five-step saved routines to all four demo pages. Added a 12-minute sales-and-marketing segment, three-post planner and copyable masters. Checked the 60-minute schedule, new copy buttons, phone widths and PDF text preservation. Corrected cramped continuation pages and preserved template line breaks.

• Nuxt typecheck passed. Eight meaningful calculation/workflow tests passed. Production build passed. The deployment and public routes are checked during publication.

Last Checks In The Room

Open the prepared successful ChatGPT conversation and notebook before the audience arrives. Try one short prompt, open one citation and load the offline calculator. Clear welcome dialogs and hide unrelated chats/notifications. Check projector text size and hotspot. Confirm organiser handoff details.

Opening generation limit 30 seconds; later 45 seconds. One recovery attempt, then the clearly labelled fallback. Cut optional chart generation and print enhancement first. Protect participant practice and finish at 10:20.
