

The AI Toolkit

AI for your everyday business tasks.

Cedrouseroll Omondi
DADA HUB, Parklands
31 October 2026 · 9:20–10:20 AM EAT

Flowt

Financial intelligence that unlocks capital for small & mid-size businesses in emerging markets

SCAN TO EXPLORE

flowt.africa ↗

SchoolBooks

AI agents for school finance and operations.

Accounting, fees, payroll and everyday administration, with your team in control.

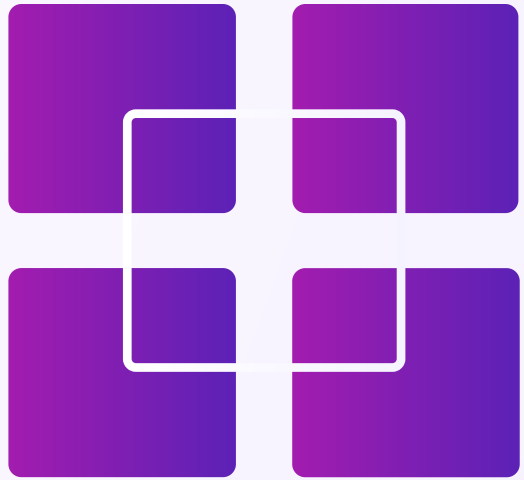

SCAN TO EXPLORE

schoolbooks.ke ↗

What you will see

1. A client reply
2. A document checklist
3. A stock decision
4. A working calculator

Then choose one task for Monday.

Three ways to work with AI

01

Ask & refine

Draft, summarise, analyse.

ChatGPT

02

Read & trace

Ask about a document and inspect the source.

NotebookLM

03

Delegate & review

Give a goal, inspect the work and test the result.

Codex

These uses overlap. Google's current help centre calls NotebookLM "Gemini Notebook".

A useful brief has five parts.

Role

Who should help?

Context

What do they need to know?

Task

What should they do?

Format

How should it look?

Check

What must be verified?

“Do not invent prices, dates or commitments.”

01 / SALES & MARKETING

A better client reply.

ChatGPT

This is enough to begin.

> Mrs Wanjiru, 3BR in Kilimani. Living + dining. Budget around 450k. Warm colours, hates grey. Two dogs. Keeps the sofa. Wants it ready before 15 December. Repaint walls, maybe wallpaper. Sister might want a kitchen later.

Fictional client notes for this exercise.

A draft with boundaries.

> Draft a short proposal email.
> Use five clear sections.
> Keep **KES 450,000 as a budget**.
> Treat 15 December as a requested date.
> List missing information separately.

Open the full prompt ↗

YOUR TURN / 3 MINUTES

One change. One short reply.

Use the fictional notes.
Change a preference.
Check the budget, date and sofa.

Pair up if you do not have an account open.

02 / RESEARCH

An answer you can trace.

NotebookLM / Gemini Notebook

A cleaning job in Parklands.

400 m^2

Three visits each week

Monthly windows included.

Open the RFQ and prompt ↗

What must we submit?

Required documents
Deadline
Budget ceiling
Explicit rejection grounds

“Not specified” can be useful.

> How many windows are there?
>
> How big are they?
>
> Can we reach all of them safely?

The source does not establish those answers.

The next step is a clarification question.

A task can run while we move on.

GOAL

A cleaning quote calculator.

DELIVERABLE

One working HTML file.

RULES

Area, visits, windows and tax assumption.

CHECKS

Known totals and invalid inputs.

Copy the Codex task ↗

03 / OPERATIONS & MONEY

What is your stock saying?

ChatGPT

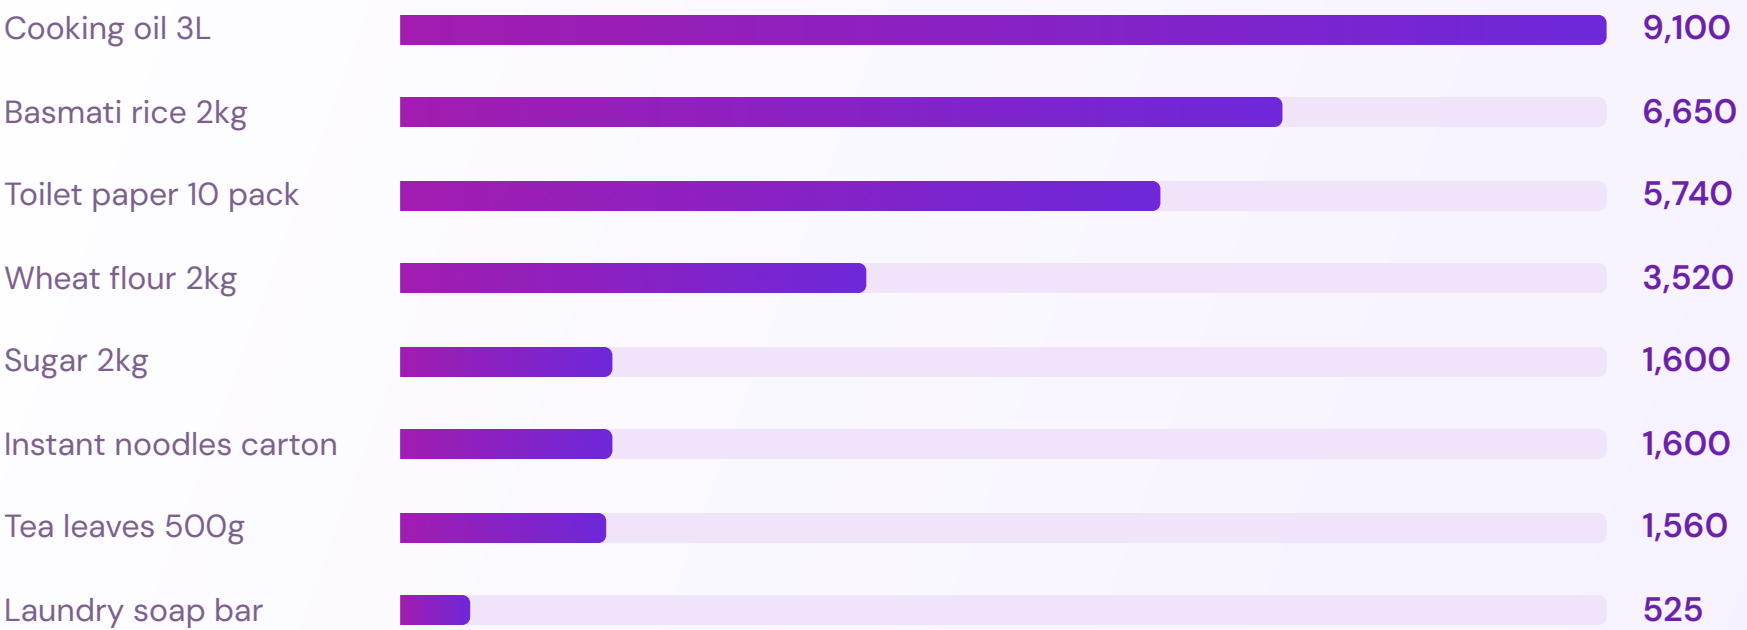

Which product earns the most?

Product	Sold	Cost / unit	Price / unit
Basmati rice 2kg	95	310	380
Cooking oil 3L	70	720	850
Wheat flour 2kg	88	170	210
Tea leaves 500g	12	350	480
Toilet paper 10 pack	82	380	450

Selected rows from the fictional 30-day dataset. All amounts in KES.

Open the full dataset and prompt ↗

Cooking oil contributes the most.

Gross profit from units sold, in KES. Fictional data. Independently checked reference chart.

The totals need the right label.

30,295

KES gross profit

Revenue **KES 179,640**
Cost of units sold **KES 149,345**

Overheads are missing.

Net profit is unknown.

Rice: 95 × (380 − 310) = KES 6,650

What would you investigate next?

Running low

Toilet paper: about 2.9 days left

Flour: about 4.1 days

Oil: about 4.3 days

Moving slowly

Soap: 17.5% sell-through

Tea: 20%

Noodles: 20%

Lead times, demand and cash still matter.

04 / AGENTS & PRODUCTIVITY

A small tool, built for you.

Codex

The work includes the checks.

Brief → **Build** → **Test** → **Review**

Goal + constraints

Actual working files

Expected behaviour

Your decision

A finished-looking screen still needs testing.

A quote in a few clicks.

YOUR CLEANING PLAN

Floor area square metres

400

Visits per week

3 visits per week

☑ Include monthly window cleaning

KES 6,000 per month

ESTIMATED MONTHLY TOTAL

Ksh 115,536.00

13 average visits per month

Routine cleaning	**Ksh 93,600.00**
Windows	**Ksh 6,000.00**
Subtotal	**Ksh 99,600.00**
Illustrative VAT (16%)	**Ksh 15,936.00**

Training example. KES 18/m²/visit, 52 ÷ 12 weeks/month. The illustrative 16% VAT applies to both cleaning and windows. Actual visits, scope and applicable taxes need confirmation.

Three checks before you trust it.

Case	Expected result
100 m² · 3 visits/week · windows	KES 34,104
400 m² · 3 visits/week · windows	KES 115,536
Blank, zero or negative area	No valid quote

Then ask for one change: “Add a print button.”

When the same steps repeat.

Form → **Sheet** → **Draft** → **Approve**

A new enquiry → A consistent record → A suggested reply → A person reviews

Automation tools such as Make can connect the steps.

Three habits worth keeping.

01

Brief clearly.

Give the facts and the constraints.

02

Check the work.

Trace claims. Verify numbers. Test the result.

03

Use data carefully.

Work with information you are authorised to use.

A first step for your business.

If the task is…	Start here	First step
Writing a client reply	ChatGPT	Notes + clear brief
Understanding a document	NotebookLM	One source + one citation check
Finding patterns in sales	ChatGPT	Table + checked calculations
Creating a small tool	Codex	Goal + rules + acceptance checks
Repeating steps across apps	Automation	Map one simple workflow

Open the take-home resources ↗

MONDAY, 2 NOVEMBER / YOUR COMMITMENT

One task. One first step.

The task that takes time each week...

The tool I will try...

The result I will check...

Write for 60 seconds. Then tell your neighbour.

The AI drafts.
You check.
You decide.

Thank you.

Victoria's icebreaker is next.
Billy Mwangi: Running Your Business with Claude, 10:30.

APPENDIX / SOURCE NOTES

References and assumptions

- Google: source citations and notebook chat
- OpenAI: Codex environments
- Make: credits and AI-provider options
- ODPC: personal data protection handbook
- Slidev: working with AI
- Unicorn theme by Alba Silvente

All client, RFQ, sales and pricing examples are fictional training material. The portrait is AI-stylised from the speaker's supplied photograph. Product access varies by account. No model rankings or price comparisons are required.

APPENDIX / PRESENTER FALLBACK

A rehearsal makes the live demo easier.

Before the room

Sign in on the presenting laptop.
Load the notebook source.
Keep prompts ready to copy.
Save actual rehearsal outputs.

If a tool stalls

Allow about 45–60 seconds.
Explain what happened.
Show the saved example.
Keep the 10:12 close.

The embedded calculator and chart are checked references, not claims of live AI execution.
