10 / TOOLS AND EVERYDAY WORKFLOWS

Start with the job.

20 business tasks. 27 tools to consider.
Official source review: 31 October 2026.

THREE QUESTIONS THIS GUIDE ANSWERS

What is each tool good for? Which fits the work and setup you already have? How can you turn it into a routine you will use again?

Choose a fit for the work

Start with a small task in a tool you already have. Compare the output, the effort to check it, the person who will use it and the full cost. A saved prompt, a reusable tool and a connected automation need different amounts of setup.

Put it into your week

Each task has a suggested starting point, alternatives and a repeatable routine: when to use it, what to supply, the steps, who checks it and what to save. Copy the routine into your own notes from the website. Try the first five runs before connecting more apps.

About the recommendations

Product capabilities come from the linked official documentation. The tool choices and workflows are editorial recommendations, not benchmark rankings. Only the workshop tools have been rehearsed. Check the current plan, supported languages, permissions and total costs before paying.

Search by business need or tool

Map a workflow for your business

10 / Find your task

What do you need done?

No.	Business task
01	Reply to a client
02	Understand a tender or policy
03	Understand sales and stock
04	Build a small internal tool
05	Stop copying between apps
06	Compare suppliers or market options
07	Prepare a week of marketing
08	Turn notes into a pitch
09	Leave meetings with clear actions
10	Make your SOPs easier to use
11	Answer recurring customer questions
12	Adapt a message for another language
13	Turn a recording into useful clips
14	Turn invoices into a checked table
15	Follow up sales leads
16	Prepare a customer email campaign
17	Schedule approved social posts
18	Write clear product listings
19	Help a new team member learn the job
20	Find patterns in customer feedback

After the task guides: a tool-by-tool reference with useful capabilities, fit, setup and a first experiment.

01 / Sales

Reply to a client

A useful draft without accidental promises.

WHERE I WOULD START

ChatGPT if you already use it; move to your existing work suite when that is where your approved context lives.

ChatGPT

General-purpose drafting; demonstrated today. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

A second option for document-heavy drafting. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

Gemini

Useful when your authorised documents are in Google's tools. Google account; Workspace permissions and upload limits vary.

Open Gemini | Official source & requirements

Microsoft 365 Copilot

Consider when the team already works in Microsoft 365. Check the specific app, work account licence and administrator settings.

Open Microsoft 365 Copilot | Official source & requirements

Notion AI

Consider when the brief and SOP already live in Notion. Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Open Notion AI | Official source & requirements

BEFORE USING THE RESULT

Check every promise, amount and date. Remove internal notes before sending.

Open this task online

01 / Put it into your workflow

Reply to a client

When: When a client enquiry arrives

Have ready: Client notes, approved services and the facts that still need confirmation.

Step 1

Open a fresh chat. Paste the current notes and saved reply prompt.

Step 2

Check names, scope, dates and amounts. Keep internal notes out of the customer reply.

Step 3

Send the approved reply yourself and record the next step in your client list.

Step 4 - save and use again

A Sales & Content Kit with approved facts, the prompt and a generic example. Keep each client's notes separate.

Person responsible: Owner or person handling enquiries

How to tell if it helps: Drafting time, corrections needed and enquiries moved to a next step.

Starter prompt

Using only these approved notes, draft a 150-word client reply. Separate confirmed facts from questions. Do not invent prices, dates or commitments. Put internal checks after the reply. Notes: [paste approved client notes].

Copy this routine into your notes

02 / Documents

Understand a tender or policy

A checklist you can trace to the source.

WHERE I WOULD START

NotebookLM for a focused set of documents and visible citation checks.

NotebookLM

Selected-source questions and source navigation. Google account; currently labelled Gemini Notebook on the presenting account.

Open NotebookLM | Official source & requirements

ChatGPT

Read an uploaded file and request exact supporting passages. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Summarise an uploaded document and extract requirements. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

Gemini

Ask questions about uploaded documents. Google account; Workspace permissions and upload limits vary.

Open Gemini | Official source & requirements

Adobe Acrobat AI

Consider when you spend most of your time in PDFs. Check AI Assistant/PDF Spaces entitlement; OCR quality affects scanned documents.

Open Adobe Acrobat AI | Official source & requirements

BEFORE USING THE RESULT

Open the original passage. Citation behaviour differs by product; a fluent answer is not proof.

Open this task online

02 / Put it into your workflow

Understand a tender or policy

When: When an RFQ or policy update arrives

Have ready: The current document and any official clarifications.

Step 1

Create one source collection for this opportunity and select the current files.

Step 2

Ask for a checklist. Open the passages supporting deadlines and mandatory items.

Step 3

Copy checked requirements into a checklist; add an owner and internal due date.

Step 4 - save and use again

The source folder, saved question and dated checklist. Recheck affected answers after an update.

Person responsible: Bid coordinator or process owner

How to tell if it helps: Missing requirements resolved and time spent finding evidence.

Starter prompt

Using only the supplied document, list requirements, deadlines and explicit rejection grounds. Cite the section and exact supporting passage for each. Separate mandatory from optional. Write “Not specified” for missing information.

Copy this routine into your notes

03 / Numbers

Understand sales and stock

Checked totals and a short list of decisions to investigate.

WHERE I WOULD START

ChatGPT for the workshop; Excel Copilot when the business already manages this workbook in Excel.

ChatGPT

Explain the data and calculate with tools where available. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Analyse data and create spreadsheet outputs. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

Gemini

Explore an uploaded spreadsheet. Google account; Workspace permissions and upload limits vary.

Open Gemini | Official source & requirements

Excel Copilot

Keep the analysis within an eligible Excel workbook. Requires an eligible account and supported workbook setup; check Excel requirements.

Open Excel Copilot | Official source & requirements

Julius

Consider a dedicated data-analysis workspace. Account and usage allowance required; verify calculations against your source file.

Open Julius | Official source & requirements

BEFORE USING THE RESULT

Reconcile totals independently. Check units, time period, missing costs and duplicate rows.

Open this task online

03 / Put it into your workflow

Understand sales and stock

When: At month-end or before a stock order

Have ready: A dated sales export with units, prices, costs and stock movements.

Step 1

Keep the original export and analyse a copy with clear assumptions.

Step 2

Reconcile totals and calculate two rows independently. Ask about missing costs and movements.

Step 3

Record the decision with current demand, cash and delivery information before ordering.

Step 4 - save and use again

A monthly review folder: source file, prompt, checked table and decision log.

Person responsible: Owner or stock controller

How to tell if it helps: Reconciled totals, review time and actual stock outcomes.

Starter prompt

From this table, calculate revenue, cost of units sold, gross profit and closing stock. Show formulas, check totals and flag missing data. Do not call gross profit net profit. State whether you actually used a calculation tool. Data: [table].

Copy this routine into your notes

04 / Tools

Build a small internal tool

A working calculator, checklist or form with acceptance checks.

WHERE I WOULD START

Codex for actual files and tests; browser app builders can reduce initial setup for a prototype.

Codex

File-based work and testable business rules; demonstrated today. Prepare a demo folder and tool access first; review files and test results.

Open Codex | Official source & requirements

Claude Code

Another coding agent for an authorised project. Coding workspace setup and an eligible subscription/API account; technical review needed.

Open Claude Code | Official source & requirements

Cursor

Useful when someone maintains the tool in an editor. Install an editor and prepare the project; review commands and changes.

Open Cursor | Official source & requirements

Replit

Browser workspace for building and previewing. Check build credits and hosting costs separately; test before publishing.

Open Replit | Official source & requirements

Lovable

Prompt-driven web app prototyping. Check credits, hosting and backend requirements; review access and data handling.

Open Lovable | Official source & requirements

BEFORE USING THE RESULT

Test the actual implementation, invalid input and phone layout. A prototype still needs security and maintenance decisions.

Open this task online

04 / Put it into your workflow

Build a small internal tool

When: When the same calculation or checklist keeps coming back

Have ready: Exact rules, known inputs and answers, and the person who owns changes.

Step 1

Write the required inputs, output and three examples with expected answers.

Step 2

Ask the coding tool to build the file, then test known cases and missing inputs.

Step 3

Keep the approved copy. Ask for a short guide explaining how to open and update it.

Step 4 - save and use again

A versioned tool, bookmark, rate/rule sheet and test examples. Arrange a reviewed shared URL if the team needs access.

Person responsible: Business owner with technical help for publishing and maintenance

How to tell if it helps: Time saved, mistakes caught and whether another person can use it.

Starter prompt

Build a phone-friendly [tool] in this demo folder. Rules: [exact rules]. Deliver actual working files. Test these known inputs and expected outputs: [cases]. Report checks performed and limits. Do not publish until I review it.

Copy this routine into your notes

05 / Automation

Stop copying between apps

A new enquiry becomes a record and a draft awaiting review.

WHERE I WOULD START

Make for a visual flow; choose Zapier for a straightforward supported app pair, or n8n with technical help.

Make

Visual branching and app integrations. Connect authorised accounts; budget for automation credits and any AI provider usage.

Open Make | Official source & requirements

Zapier

Trigger-and-action workflows across connected apps. Account connections and a tested trigger/action setup; features and task limits vary.

Open Zapier | Official source & requirements

n8n

More control with technical setup and human fallbacks. More technical setup; cloud subscription or maintained self-hosting plus provider costs.

Open n8n | Official source & requirements

BEFORE USING THE RESULT

A diagram is not a connection. Test duplicates, missing fields, failed steps and approval in the actual accounts. Start with internal records.

Open this task online

05 / Put it into your workflow

Stop copying between apps

When: When a new form response or record arrives

Have ready: One supported app pair, required fields, unique record ID and an owner.

Step 1

Write the steps on paper. Begin with a record or notification using rules.

Step 2

Connect authorised accounts in the chosen tool and test a few sample records.

Step 3

Test missing fields, duplicates and a failed step. Add AI drafting and review only when the basic flow works.

Step 4 - save and use again

A named workflow with an owner, failure notification and a short test checklist.

Person responsible: Person responsible for the process and account connections

How to tell if it helps: Successful runs, duplicate records, exceptions and cost per run.

Starter prompt

Design this workflow: new enquiry → validate required fields → skip duplicate enquiry ID → create a record → draft an acknowledgement → wait for human approval. Route missing information and failures to a person. Specify inputs, outputs, owner and five test cases. Do not send any messages.

Copy this routine into your notes

06 / Research

Compare suppliers or market options

A dated comparison with evidence and unanswered questions.

WHERE I WOULD START

Perplexity for web-source discovery; verify supplier claims directly before deciding.

Perplexity

Web answers with source links. Check source dates and original pages; deeper research allowances vary by plan.

Open Perplexity | Official source & requirements

ChatGPT

Research and compare sources in a supported browsing mode. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Gemini

Explore supplied supplier information. Google account; Workspace permissions and upload limits vary.

Open Gemini | Official source & requirements

BEFORE USING THE RESULT

Check geography, delivery, taxes and the actual quotation. Do not treat old pages or generated estimates as current prices.

Open this task online

06 / Put it into your workflow

Compare suppliers or market options

When: Before choosing a supplier or entering a new market

Have ready: Your requirements, region, comparison criteria and supplier documents or URLs.

Step 1

Ask for a dated comparison using original sources and explicit unknowns.

Step 2

Verify specifications, coverage and published prices with the supplier.

Step 3

Request comparable quotations and record the reasons for your shortlist.

Step 4 - save and use again

A comparison sheet with source URLs, dates, open questions and a review date.

Person responsible: Owner or buyer

How to tell if it helps: Time to a supported shortlist and unanswered questions resolved.

Starter prompt

Compare these three suppliers for [need]. Use current first-party sources, list URLs and dates, separate published facts from assumptions, and mark unavailable prices “Request quote”. Give five questions to ask before choosing.

Copy this routine into your notes

07 / Marketing

Prepare a week of marketing

Three useful posts and one editable visual.

WHERE I WOULD START

Use your existing assistant for copy and Canva for the visual layout.

Canva

Design and edit social visuals from a brief. Check AI feature limits and asset licences for the account you use.

Open Canva | Official source & requirements

ChatGPT

Draft copy from approved product facts. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Rewrite copy to match a supplied example of your voice. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

BEFORE USING THE RESULT

Check claims, spelling, contact details and image rights. Preview the final mobile crop before publishing.

Open this task online

07 / Put it into your workflow

Prepare a week of marketing

When: During a weekly marketing review

Have ready: One audience, one offer, approved facts, customer questions and a clear next step.

Step 1

Use the saved campaign brief to draft three posts with different purposes.

Step 2

Review one caption and an actual image. Check claims and the phone preview.

Step 3

Publish approved posts yourself and record enquiries and useful next steps.

Step 4 - save and use again

Your Sales & Content Kit and weekly planner. Replace the weekly brief; keep the approved business facts current.

Person responsible: Owner or marketing lead

How to tell if it helps: Qualified enquiries, site visits and quote requests after seven days.

Starter prompt

Using only these approved product facts, draft three posts: a useful tip, a customer question answered, and an offer. Audience: [people]. Voice: [example]. One clear action each. No invented testimonials or performance claims. Then write a visual brief for the strongest post.

Copy this routine into your notes

08 / Marketing

Turn notes into a pitch

A short deck with one clear ask.

WHERE I WOULD START

Gamma for a quick presentation draft; Canva when brand layout control matters more.

Gamma

Build a deck from a conversational brief. Check creation credits, export options and plan limits.

Open Gamma | Official source & requirements

Canva

Edit a branded visual presentation. Check AI feature limits and asset licences for the account you use.

Open Canva | Official source & requirements

Claude

Create presentation files from source material. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

BEFORE USING THE RESULT

Verify each figure and claim; review exported slides for layout and readability.

Open this task online

08 / Put it into your workflow

Turn notes into a pitch

When: Before a pitch, sales meeting or team briefing

Have ready: Approved notes, evidence, audience and one clear ask.

Step 1

Ask for a short outline with one point per slide and missing evidence marked.

Step 2

Check figures and claims; edit the deck to match your voice and brand.

Step 3

Export it, inspect every page and rehearse the spoken story.

Step 4 - save and use again

An approved deck template, source notes and an export you can open offline.

Person responsible: Presenter or sales lead

How to tell if it helps: Preparation time and whether the audience understands the next step.

Starter prompt

Create a six-slide pitch from these approved notes: problem, customer, solution, evidence, business model, ask. Do not invent traction, customers or financial projections. Mark missing evidence. Keep one main point per slide.

Copy this routine into your notes

09 / Operations

Leave meetings with clear actions

Decisions, owners and dates that people can confirm.

WHERE I WOULD START

Otter for meeting capture; Notion AI if notes and tasks already live in Notion.

Otter

Transcription, summaries and action items. Obtain participant agreement before recording; check language support and meeting limits.

Open Otter | Official source & requirements

Notion AI

Meeting notes connected to workspace tasks. Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Open Notion AI | Official source & requirements

ChatGPT

Turn an authorised transcript or typed notes into actions. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

BEFORE USING THE RESULT

Get recording agreement; confirm names and decisions with participants. Never invent an owner or deadline.

Open this task online

09 / Put it into your workflow

Leave meetings with clear actions

When: After a meeting

Have ready: Authorised notes or a transcript, with recording agreement when applicable.

Step 1

Ask for decisions and actions, keeping suggestions separate from agreements.

Step 2

Ask participants to confirm unclear owners and dates.

Step 3

Put agreed actions in your existing task list and check them at the next meeting.

Step 4 - save and use again

A meeting-note template and decision log linked to the action list.

Person responsible: Meeting organiser

How to tell if it helps: Actions with confirmed owners and completion at the next review.

Starter prompt

From these meeting notes, list decisions and actions with owner, due date and supporting quote. Mark unassigned owners or dates “Not agreed”. Separate proposals from decisions. Notes: [authorised notes].

Copy this routine into your notes

10 / Operations

Make your SOPs easier to use

Answers linked to approved procedures.

WHERE I WOULD START

Notion AI if procedures already live there; NotebookLM for a small source collection.

Notion AI

Search workspace knowledge and draft procedures. Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Open Notion AI | Official source & requirements

NotebookLM

Ask across selected policy sources. Google account; currently labelled Gemini Notebook on the presenting account.

Open NotebookLM | Official source & requirements

Claude

Turn an authorised process description into an SOP draft. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

BEFORE USING THE RESULT

Use current, approved versions. Confirm access permissions and assign an owner to keep the source updated.

Open this task online

10 / Put it into your workflow

Make your SOPs easier to use

When: When a procedure changes or a question keeps recurring

Have ready: Current approved SOPs, source dates and the people who may access them.

Step 1

Keep one approved source collection and remove outdated versions.

Step 2

Ask a real staff question and inspect the supporting procedure.

Step 3

Have the process owner resolve gaps, then update the source and retest the question.

Step 4 - save and use again

A bookmarked knowledge space with an owner, review date and example questions.

Person responsible: Process owner

How to tell if it helps: Questions answered correctly and gaps closed in the source.

Starter prompt

From these approved procedures, create a checklist for a new team member. Include owner, step, exception and source section. Flag contradictions and missing steps. Do not invent policy.

Copy this routine into your notes

11 / Sales

Answer recurring customer questions

Useful answers with a clear route to a person.

WHERE I WOULD START

Start by drafting an approved FAQ. Consider Intercom Fin once you have maintained content and enough support volume.

Intercom Fin

Connected customer support with escalation settings. Needs maintained support content, escalation rules and a costed support setup.

Open Intercom Fin | Official source & requirements

NotebookLM

Internal source-checking for staff; not a deployed support widget. Google account; currently labelled Gemini Notebook on the presenting account.

Open NotebookLM | Official source & requirements

ChatGPT

Draft and test FAQ answers before adding an integration. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

BEFORE USING THE RESULT

These options serve different stages. Test ambiguous questions, outdated policies, escalation and the cost per resolved conversation.

Open this task online

11 / Put it into your workflow

Answer recurring customer questions

When: When the same customer questions recur

Have ready: Approved FAQs, current policies and a clear escalation contact.

Step 1

Draft answers for common questions from the approved information.

Step 2

Test normal, ambiguous and missing-information questions with a staff member.

Step 3

Keep staff review first. Configure a support integration only when content and escalation are dependable.

Step 4 - save and use again

A reviewed FAQ, unanswered-question log and route to a person.

Person responsible: Customer support lead

How to tell if it helps: Correct answers, unresolved questions and successful handoffs.

Starter prompt

Using this approved FAQ, answer each test question in two sentences. If the answer is absent, contradictory or about a disputed charge, route it to a person. Do not invent policy or offer refunds. Include the supporting source.

Copy this routine into your notes

12 / Communication

Adapt a message for another language

A draft checked for meaning and tone.

WHERE I WOULD START

DeepL when it supports your exact language pair and glossary; compare an assistant draft with a fluent reviewer.

DeepL

Document translation and supported glossaries. Confirm your exact language pair and glossary/file features before subscribing.

Open DeepL | Official source & requirements

Notion AI

Translate an existing workspace page. Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Open Notion AI | Official source & requirements

ChatGPT

Draft a translation with audience and tone context. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

BEFORE USING THE RESULT

Confirm language support; a fluent speaker should check meaning. Do not assume Swahili or regional-language quality from a product's general translation claim.

Open this task online

12 / Put it into your workflow

Adapt a message for another language

When: When an approved message needs another language

Have ready: The original message, target audience and names or terms to preserve.

Step 1

Confirm the exact language pair is supported and supply a short glossary.

Step 2

Generate a draft and have a fluent reviewer check meaning, dates and tone.

Step 3

Keep the approved translation with its original and update both when facts change.

Step 4 - save and use again

A bilingual message library and glossary with reviewer and revision date.

Person responsible: Communications owner and fluent reviewer

How to tell if it helps: Corrections needed and audience understanding.

Starter prompt

Translate this message into [language] for [audience]. Preserve names, numbers, dates and product terms. Flag phrases with more than one meaning. Include a short back-translation for review. Text: [approved text].

Copy this routine into your notes

13 / Marketing

Turn a recording into useful clips

A short captioned clip you can review before posting.

WHERE I WOULD START

Descript for transcript-based editing; Canva for finishing the visual layout.

Descript

Edit a recording through text and create clips or captions. Prepare a recording you may use; check media minutes and AI credits.

Open Descript | Official source & requirements

Canva

Lay out the final social video and brand elements. Check AI feature limits and asset licences for the account you use.

Open Canva | Official source & requirements

BEFORE USING THE RESULT

Check the cut against the original recording. Correct names and numbers in captions and confirm permission to use the recording.

Open this task online

13 / Put it into your workflow

Turn a recording into useful clips

When: After recording a useful explanation or demonstration

Have ready: A recording you may use, intended audience and target channel.

Step 1

Select an excerpt that answers a customer question and retains its context.

Step 2

Edit the clip and correct names, numbers and wording in captions.

Step 3

Review the final crop and sound on a phone, then approve it for posting.

Step 4 - save and use again

The original recording, editable project, caption style and approved export.

Person responsible: Content owner

How to tell if it helps: Editing time and useful responses to the published clip.

Starter prompt

From this authorised recording, suggest three short clips that answer real customer questions. Preserve the speaker's meaning, include enough context, and draft accurate captions. Do not publish automatically.

Copy this routine into your notes

14 / Numbers

Turn invoices into a checked table

A draft register with exceptions for a person to resolve.

WHERE I WOULD START

Use an assistant you already have for a small authorised batch; Acrobat AI can help inspect PDF source passages.

ChatGPT

Read supplied files and structure a draft register. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Extract supplied information into a spreadsheet output. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

Adobe Acrobat AI

Ask questions about a PDF and inspect its source. Check AI Assistant/PDF Spaces entitlement; OCR quality affects scanned documents.

Open Adobe Acrobat AI | Official source & requirements

BEFORE USING THE RESULT

Verify every amount and currency against the original. Check duplicate invoices, credit notes, OCR errors and tax treatment before importing. Extraction is not bookkeeping approval.

Open this task online

14 / Put it into your workflow

Turn invoices into a checked table

When: When a small batch of invoices arrives

Have ready: Readable source files and the fields required in your existing register.

Step 1

Ask for a draft table with source filenames and unreadable fields flagged.

Step 2

Compare amounts, currencies and possible duplicates with the originals.

Step 3

Have the responsible person approve the register before importing it into accounting.

Step 4 - save and use again

A source folder, extraction prompt and dated register with unresolved items.

Person responsible: Bookkeeper or person responsible for invoices

How to tell if it helps: Reconciled amounts, extraction errors and review time.

Starter prompt

From these invoices, extract supplier, invoice number, date, currency, subtotal, tax, total and source filename. Leave unreadable or absent values blank and flag them. Identify possible duplicates without deleting anything. Reconcile subtotal plus tax to total; do not post to accounting or initiate payment.

Copy this routine into your notes

15 / Sales

Follow up sales leads

A current next step for each open enquiry.

WHERE I WOULD START

Use your existing lead sheet and assistant for a small list. HubSpot fits when a team needs shared contact history and follow-up ownership.

HubSpot

CRM context, meeting summaries and follow-up drafts. Keep customer records current. AI meeting and follow-up features depend on the HubSpot product, account permissions and plan.

Open HubSpot | Official source & requirements

ChatGPT

Draft from a small, approved set of contact notes. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Microsoft 365 Copilot

Consider when correspondence already lives in Outlook. Check the specific app, work account licence and administrator settings.

Open Microsoft 365 Copilot | Official source & requirements

BEFORE USING THE RESULT

Check the right recipient, latest conversation and whether a reply already arrived. A suggested follow-up date is not a date the client agreed to.

Open this task online

15 / Put it into your workflow

Follow up sales leads

When: After a sales call or a promised follow-up date

Have ready: Current lead notes and the last agreed next action.

Step 1

Open the lead record and check whether the person has already replied.

Step 2

Draft a follow-up from that lead's own notes and confirm the requested action.

Step 3

Review and send it yourself. Update the owner and next action in the lead sheet or CRM.

Step 4 - save and use again

A lead register and saved follow-up prompt. CRM means your shared customer/contact record.

Person responsible: Sales owner

How to tell if it helps: Leads with a current next action and overdue follow-ups.

Starter prompt

From these authorised lead notes, list the last confirmed action, next action, owner and agreed date. Mark missing facts "Not agreed". Draft a short follow-up for each lead using only its own notes. No invented interest, urgency, discounts or commitments. Do not send anything. Notes: [notes].

Copy this routine into your notes

16 / Marketing

Prepare a customer email campaign

One reviewed email for an audience that expects to hear from you.

WHERE I WOULD START

Mailchimp fits when you already manage a subscribed audience there. Use an assistant to draft first if all you need is wording.

Mailchimp

Draft email content in a campaign builder; sending needs a configured audience. AI email content creation requires a paid plan and the supported email builder. Audience setup and approval to send are separate.

Open Mailchimp | Official source & requirements

ChatGPT

Turn an approved offer into subject lines and body copy. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Adapt a draft to your existing tone and product notes. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

BEFORE USING THE RESULT

Confirm the audience, offer terms, links, sender details and unsubscribe option. Send yourself a test and review on a phone before approving.

Open this task online

16 / Put it into your workflow

Prepare a customer email campaign

When: When you have a useful update for subscribers

Have ready: An approved offer, the intended subscribed audience and a working destination link.

Step 1

Draft one email and subject line from the offer; keep audience selection explicit.

Step 2

Build the email in your usual platform and send a test to yourself.

Step 3

Review links, offer terms and the phone layout before authorising the send. Record actual responses.

Step 4 - save and use again

An approved email template and campaign log with audience, owner, date and results.

Person responsible: Marketing owner

How to tell if it helps: Replies, useful clicks, conversions and unsubscribes; do not rely only on opens.

Starter prompt

Draft one email for [subscribed audience] about [approved offer]. Give two accurate subject lines, preview text, a body under 150 words and one call to action. Use only [facts]. Do not invent scarcity, discounts or results. List missing details separately. Draft only; do not send or schedule.

Copy this routine into your notes

17 / Marketing

Schedule approved social posts

A reviewed posting calendar with a clear person responsible.

WHERE I WOULD START

Buffer fits when posting across supported channels is already a recurring job. Keep manual posting if you are still testing one channel.

Buffer

AI-assisted drafting plus a queue for supported social accounts. Connect the correct social accounts. Check supported formats, channel limits and team approval features for your plan.

Open Buffer | Official source & requirements

Canva

Prepare the visuals before adding them to your posting workflow. Check AI feature limits and asset licences for the account you use.

Open Canva | Official source & requirements

ChatGPT

Adapt approved copy for each channel; a chat alone is not a publishing connection. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

BEFORE USING THE RESULT

Confirm supported post formats, connected account, time zone, crop, links and approval status. Scheduling can publish later without another prompt.

Open this task online

17 / Put it into your workflow

Schedule approved social posts

When: At your weekly publishing review

Have ready: Approved captions, actual image files, channels and the correct time zone.

Step 1

Connect the intended accounts and save posts as drafts in the scheduler.

Step 2

Preview each channel, confirm dates and check that the offer is still current.

Step 3

Approve the schedule deliberately and check published posts and failed-post alerts.

Step 4 - save and use again

A content calendar, brand brief and named owner for approval and failures.

Person responsible: Marketing owner

How to tell if it helps: Posts published correctly, failures caught and useful customer responses.

Starter prompt

Turn these approved posts into a weekly posting checklist. Include channel, date, time zone, caption, asset needed, owner and approval status. Mark all posts Draft until a person approves. Flag missing links or images. Do not schedule or publish. Posts: [approved drafts].

18 / Sales

Write clear product listings

Consistent descriptions that answer buying questions.

WHERE I WOULD START

Start with ChatGPT or Claude and your product sheet. Use Canva for an approved product graphic, with the actual product image.

ChatGPT

Draft descriptions and FAQs from supplied specifications. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Keep a set of descriptions consistent with a supplied style. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

Canva

Lay out a product card using approved text and images. Check AI feature limits and asset licences for the account you use.

Open Canva | Official source & requirements

BEFORE USING THE RESULT

Compare every specification, price and variant with the product record. Confirm actual stock and delivery separately before publishing.

Open this task online

18 / Put it into your workflow

Write clear product listings

When: When adding or updating products

Have ready: A current product sheet with verified specifications, variants and prices.

Step 1

Draft one listing first and agree the style before processing a batch.

Step 2

Match every feature, unit and price against the product sheet.

Step 3

Approve the copy and image; update the listing in your existing shop or catalogue.

Step 4 - save and use again

A product-copy template, approved examples and a link to the current product record.

Person responsible: Shop or catalogue owner

How to tell if it helps: Correction rate, preparation time and repeated buyer questions.

Starter prompt

For each product below, write a title, 60-word description, three factual features and two buyer questions. Preserve units, variants and supplied prices. Mark missing specifications. Do not invent stock availability, warranties, delivery dates or reviews. Product facts: [table].

Copy this routine into your notes

19 / Operations

Help a new team member learn the job

A first-week checklist and practice questions from your procedures.

WHERE I WOULD START

NotebookLM fits a small set of approved guides. Notion AI fits when the team already keeps and updates procedures in Notion.

NotebookLM

Ask questions of selected guides and inspect the supporting source. Google account; currently labelled Gemini Notebook on the presenting account.

Open NotebookLM | Official source & requirements

Notion AI

Draft training material alongside the procedures the team maintains. Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Open Notion AI | Official source & requirements

ChatGPT

Turn approved instructions into exercises and a checklist. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

BEFORE USING THE RESULT

Have the process owner check the material. Use supervised practice for tasks where mistakes affect customers, safety or money.

Open this task online

19 / Put it into your workflow

Help a new team member learn the job

When: Before a new team member starts

Have ready: Current procedures, role responsibilities and a named supervisor.

Step 1

Draft a short first-week plan and questions from the approved source guides.

Step 2

Have the process owner check each task and answer against the real procedure.

Step 3

Use the checklist during supervised practice and note questions the guide did not answer.

Step 4 - save and use again

A dated onboarding pack and checklist, maintained by the process owner.

Person responsible: Supervisor or operations lead

How to tell if it helps: Time to complete checked tasks and recurring questions resolved.

Starter prompt

From these current procedures, prepare a first-week learning checklist and five practice questions. Cite the source section for each answer. Separate reading, supervised practice and tasks needing approval. Mark gaps; do not invent company policy. Material: [approved guides].

Copy this routine into your notes

20 / Research

Find patterns in customer feedback

A short, traceable list of problems worth fixing.

WHERE I WOULD START

Use an assistant for an anonymised batch of comments; use NotebookLM when you need to inspect longer source documents alongside the summary.

ChatGPT

Group supplied comments and explain recurring themes. Start with a browser account; file and calculation tools depend on mode and plan.

Open ChatGPT | Official source & requirements

Claude

Summarise longer feedback with supporting excerpts. Browser account; check file creation and usage limits in your plan.

Open Claude | Official source & requirements

NotebookLM

Link questions about feedback reports to source passages. Google account; currently labelled Gemini Notebook on the presenting account.

Open NotebookLM | Official source & requirements

BEFORE USING THE RESULT

Trace themes to the original comments, remove duplicates and check counts. A small or self-selected sample does not represent every customer.

Open this task online

20 / Put it into your workflow

Find patterns in customer feedback

When: At a weekly or monthly service review

Have ready: An anonymised, numbered batch of comments from a stated period.

Step 1

Ask for themes, supporting comment IDs and counts, retaining conflicting views.

Step 2

Check duplicates, a few examples and the counting method against the original batch.

Step 3

Choose one improvement, give it an owner and review later feedback after the change.

Step 4 - save and use again

A feedback log with source IDs, themes, decisions, owners and review dates.

Person responsible: Owner or customer experience lead

How to tell if it helps: Recurring issues resolved and change in later feedback, with sample limits noted.

Starter prompt

Group these anonymised comments into themes. Give the number of unique comments per theme, supporting comment IDs, conflicting views and two actions to investigate. A comment can have several themes, so explain overlaps. Do not invent quotes, percentages or representativeness. Comments: [numbered comments].

10 / Tool-by-tool reference

What each tool is good for

ChatGPT / Everyday assistant

Draft, analyse files and create work you can review.

A good fit when: You need help across writing, files and analysis, and already use ChatGPT.

First experiment: Try one client reply using approved notes and check every commitment.

Setup: Start with a browser account; file and calculation tools depend on mode and plan.

Watch: A helpful draft still needs a reviewer; connected actions depend on the tools you have enabled.

Official documentation for ChatGPT

Claude / Everyday assistant

Draft documents and analyse uploaded files; create editable outputs.

A good fit when: Your work often starts with long notes or documents and ends in an editable file.

First experiment: Give it an approved brief and ask for a short document plus a list of missing facts.

Setup: Browser account; check file creation and usage limits in your plan.

Watch: Open and inspect the finished file; confident wording does not establish accuracy.

Official documentation for Claude

10 / Tool-by-tool reference

What each tool is good for

Gemini / Everyday assistant

Work with uploaded documents and spreadsheets.

A good fit when: You want to discuss supplied files or work within an existing Google environment.

First experiment: Supply one current document and ask for its key actions with supporting passages.

Setup: Google account; Workspace permissions and upload limits vary.

Watch: Confirm access to the specific Workspace feature; a Google account alone does not guarantee every integration.

Official documentation for Gemini

Microsoft 365 Copilot / Workplace assistant

Draft and revise work in the Microsoft 365 environment.

A good fit when: Your team already works in Outlook and Microsoft 365 with an eligible account.

First experiment: Draft a reply using an approved email thread, then review it before sending.

Setup: Check the specific app, work account licence and administrator settings.

Watch: Check the specific app and licence; do not assume it can see every team document.

Official documentation for Microsoft 365 Copilot

10 / Tool-by-tool reference

What each tool is good for

Notion AI / Knowledge and notes

Write, search workspace knowledge and turn notes into tasks.

A good fit when: Procedures and team notes already live in a maintained Notion workspace.

First experiment: Turn one current procedure into a checklist and have its owner check it.

Setup: Best evaluated inside an existing Notion workspace; full AI access depends on plan.

Watch: Outdated source pages produce outdated guidance; keep a person responsible for them.

Official documentation for Notion AI

NotebookLM / Source-based research

Ask questions of selected sources and inspect supporting citations.

A good fit when: You need to ask questions of a defined source collection and inspect citations.

First experiment: Upload one current RFQ, ask for requirements and open the deadline citation.

Setup: Google account; currently labelled Gemini Notebook on the presenting account.

Watch: Check the original passage and selected sources; a saved answer is not automatically current.

Official documentation for NotebookLM

10 / Tool-by-tool reference

What each tool is good for

Adobe Acrobat AI / PDF work

Ask about PDFs and follow citations back to source passages.

A good fit when: Most of the source material you work with is PDF and Acrobat is already part of the workflow.

First experiment: Ask a question about one PDF and inspect the cited passage.

Setup: Check AI Assistant/PDF Spaces entitlement; OCR quality affects scanned documents.

Watch: Scans and complex tables can be misread; verify original values and page context.

Official documentation for Adobe Acrobat AI

Excel Copilot / Spreadsheet analysis

Explore spreadsheet data, formulas, summaries and visualisations in Excel.

A good fit when: The working workbook already lives in an eligible Excel setup.

First experiment: Ask about one clean table and check a formula and total yourself.

Setup: Requires an eligible account and supported workbook setup; check Excel requirements.

Watch: Data structure, account access and workbook support affect what is available.

Official documentation for Excel Copilot

10 / Tool-by-tool reference

What each tool is good for

Julius / Spreadsheet analysis

Analyse spreadsheet data and turn findings into reports.

A good fit when: You want a dedicated workspace for exploring a supplied dataset.

First experiment: Upload a small dated table and request a chart with its calculation explained.

Setup: Account and usage allowance required; verify calculations against your source file.

Watch: Reconcile the underlying numbers; an attractive chart does not validate the source data.

Official documentation for Julius

Codex / Build and maintain tools

Build small tools, edit files and run checks in an authorised workspace.

A good fit when: You need working files and checks for a calculator, form or internal tool.

First experiment: Describe exact rules and known answers; ask it to build and test the actual file.

Setup: Prepare a demo folder and tool access first; review files and test results.

Watch: Publishing and ongoing maintenance still need an owner; review access before connecting business data.

Official documentation for Codex

10 / Tool-by-tool reference

What each tool is good for

Claude Code / Build and maintain tools

Read a project, change files and run development commands.

A good fit when: Someone can prepare and review an existing coding workspace.

First experiment: Ask for one small change with acceptance checks in an authorised project.

Setup: Coding workspace setup and an eligible subscription/API account; technical review needed.

Watch: Technical review is needed for commands, code changes and production access.

Official documentation for Claude Code

Cursor / Build and maintain tools

Build and revise code with an agent inside an editor.

A good fit when: A person maintains your software in a code editor.

First experiment: Try a small, reviewable change and run the project's checks.

Setup: Install an editor and prepare the project; review commands and changes.

Watch: It is an editor workflow; plan for someone who can review and maintain the result.

Official documentation for Cursor

10 / Tool-by-tool reference

What each tool is good for

Replit / Build and maintain tools

Build and preview apps from a brief in a browser workspace.

A good fit when: You want a browser workspace to build and preview an initial app.

First experiment: Build a simple form using sample data and check the result on a phone.

Setup: Check build credits and hosting costs separately; test before publishing.

Watch: A working preview is only a start; check hosting, permissions and ongoing costs before launch.

Official documentation for Replit

Lovable / Build and maintain tools

Create and iterate on web apps from a natural-language brief.

A good fit when: You need to explore a web app idea through a prompt-driven prototype.

First experiment: Describe one user journey and test the preview before adding more features.

Setup: Check credits, hosting and backend requirements; review access and data handling.

Watch: Review stored data, access and hosting before using it with real customers.

Official documentation for Lovable

10 / Tool-by-tool reference

What each tool is good for

Make / Connected workflows

Connect apps and branch a repeatable workflow in a visual builder.

A good fit when: You want to see branching steps and app connections on a visual canvas.

First experiment: Connect one internal trigger and action, then test a missing field and duplicate.

Setup: Connect authorised accounts; budget for automation credits and any AI provider usage.

Watch: Account connections and error handling need setup; AI steps can add separate usage costs.

Official documentation for Make

Zapier / Connected workflows

Run actions in connected apps when a trigger occurs.

A good fit when: You have a clear trigger and action supported by the apps you already use.

First experiment: Create one tested record or internal notification before adding more steps.

Setup: Account connections and a tested trigger/action setup; features and task limits vary.

Watch: Task limits, app support and multi-step features depend on the plan.

Official documentation for Zapier

10 / Tool-by-tool reference

What each tool is good for

n8n / Connected workflows

Build flexible workflows with AI steps and human fallbacks.

A good fit when: You need flexible workflow logic and have technical help to maintain it.

First experiment: Build a small internal flow with a failure route to a person.

Setup: More technical setup; cloud subscription or maintained self-hosting plus provider costs.

Watch: Self-hosting brings maintenance work; it is not simply a free replacement for a managed service.

Official documentation for n8n

Canva / Design and content

Turn a brief into designs, images and social content you can edit.

A good fit when: You need editable social visuals or presentations and want direct layout control.

First experiment: Use an approved caption and actual product photo to create one phone-readable post.

Setup: Check AI feature limits and asset licences for the account you use.

Watch: Check asset rights, factual claims and the final export; AI features vary by account.

Official documentation for Canva

10 / Tool-by-tool reference

What each tool is good for

Gamma / Design and content

Turn a brief or source material into a presentation draft.

A good fit when: You need a first presentation draft from structured notes.

First experiment: Give it six approved points and one clear ask; review the slide sequence.

Setup: Check creation credits, export options and plan limits.

Watch: Check exported slides and source evidence; generated slides can still contain unsupported claims.

Official documentation for Gamma

Descript / Video and audio

Edit recorded video through its transcript and create captions or clips.

A good fit when: You have a recording and want to edit it through its transcript.

First experiment: Make one short clip, then compare the cut and captions with the original.

Setup: Prepare a recording you may use; check media minutes and AI credits.

Watch: Transcript errors and tight cuts can change meaning; review the finished media.

Official documentation for Descript

10 / Tool-by-tool reference

What each tool is good for

Otter / Meetings

Transcribe meetings and extract summaries and action items.

A good fit when: You need meeting transcription and action summaries with participants' agreement.

First experiment: Capture one agreed meeting and confirm the summary with its participants.

Setup: Obtain participant agreement before recording; check language support and meeting limits.

Watch: Check exact language support and speaker attribution before relying on the transcript.

Official documentation for Otter

DeepL / Translation

Translate supported languages and documents with consistent glossary terms.

A good fit when: It supports your exact language pair and terminology needs.

First experiment: Translate one approved message and have a fluent reviewer check it.

Setup: Confirm your exact language pair and glossary/file features before subscribing.

Watch: Do not assume every language or glossary feature is available on every plan.

Official documentation for DeepL

10 / Tool-by-tool reference

What each tool is good for

Intercom Fin / Customer support

Answer support questions from approved knowledge and route exceptions to people.

A good fit when: You have maintained support content and enough enquiries to justify a connected support setup.

First experiment: Test a small FAQ set and an unanswered question before considering customer-facing use.

Setup: Needs maintained support content, escalation rules and a costed support setup.

Watch: Content maintenance, handoffs and ongoing conversation costs need an owner.

Official documentation for Intercom Fin

Perplexity / Web research

Research the web with linked sources.

A good fit when: You need to discover sources and build an initial web comparison.

First experiment: Compare three options and open the original sources for the key claims.

Setup: Check source dates and original pages; deeper research allowances vary by plan.

Watch: Source links are a starting point; verify dates, quoted terms and supplier details.

Official documentation for Perplexity

10 / Tool-by-tool reference

What each tool is good for

Buffer / Social publishing

Draft and adapt social copy, then organise posts for supported channels.

A good fit when: Approved posts need a reliable calendar across supported social accounts.

First experiment: Save one post as a draft, preview the channel and deliberately approve its schedule.

Setup: Connect the correct social accounts. Check supported formats, channel limits and team approval features for your plan.

Watch: Check post format and time zone; connected scheduling can publish without a later confirmation.

Official documentation for Buffer

Mailchimp / Email marketing

Create email content from approved material inside a campaign builder.

A good fit when: You have a maintained subscriber audience and a recurring email campaign.

First experiment: Build one draft from an approved offer and send a test to yourself.

Setup: AI email content creation requires a paid plan and the supported email builder. Audience setup and approval to send are separate.

Watch: An AI draft does not establish permission to email the audience or prove the offer is accurate.

Official documentation for Mailchimp

10 / Tool-by-tool reference

What each tool is good for

HubSpot / Sales and customer records

Use customer records to prepare for sales meetings and draft follow-ups.

A good fit when: A team needs shared lead history, ownership and follow-up context.

First experiment: Use one current deal record to prepare a follow-up draft and review the proposed next step.

Setup: Keep customer records current. AI meeting and follow-up features depend on the HubSpot product, account permissions and plan.

Watch: Missing or stale CRM data weakens the draft; verify the record before updating or sending.

Official documentation for HubSpot
