09 / ACTUAL REHEARSAL RESPONSES

Observed outputs

31 October 2026 | Safi Services & Supplies
These are visible product responses from rehearsal, not guaranteed future outputs.

ABOUT THIS EDITION

The observed wording is retained apart from scenario labels; table cells and equations are re-typeset for reading. Interface controls and duplicated chart accessibility labels are omitted. Citation numbers refer to the original notebook response, not links inside this PDF. See 08-rehearsal-checks.pdf for failures and limitations.

Corrected ChatGPT email

Dear Administrator,

Your needs Thank you for considering Safi Services & Supplies. We understand you require cleaning for your 400 m² offices every Monday, Wednesday and Friday after 6 pm. Services include cleaning floors, desks and washrooms, moving waste to the on-site collection point, and monthly window cleaning. We will provide cleaning products, equipment and staff.

Proposed next step We recommend a site assessment to confirm the cleaning scope and access arrangements. We will prepare a costed proposal after these checks.

Timing We have noted your requested start date of 16 November 2026 for a three-month period, subject to confirming scope and availability.

Budget We have noted your monthly budget of KES 120,000 inclusive of tax. This is your indicated budget, not our quotation.

What we need from you Please confirm the number, sizes and heights of the windows, safe access arrangements, and a suitable time for the site assessment.

Kind regards, Safi Services & Supplies

Internal checks & follow-up

Internal checks - remove before sending

Window cleaning: Confirm window count, dimensions, heights, access methods and safety requirements.

Site access: Verify after-hours entry procedures, security permissions, water and electricity availability, and equipment storage.

Cleaning scope: Confirm floor types, number of desks and washrooms, and any special cleaning requirements.

Waste management: Confirm waste types and the designated on-site collection point.

Availability: Check operational capacity for Monday, Wednesday and Friday evenings, starting 16 November 2026.

Contract period: Confirm whether the requested three months are fixed and establish the intended end date.

Pricing: Calculate costs, applicable taxes and feasibility against the client's KES 120,000 monthly budget before issuing a quotation.

Assumptions: The 400 m² covers the offices requiring cleaning; monthly window cleaning is additional to the regular cleaning schedule. Verify both.

Separate enquiry: The administrator mentioned possible home cleaning later. Treat this as an independent enquiry, with separate scope, scheduling and pricing.

Observed WhatsApp output

Hello, thank you for contacting Safi Services & Supplies. We've noted your cleaning requirements for Parklands Learning Centre's 400 m² offices every Monday, Wednesday and Friday after 6 pm, including monthly window cleaning.

We've noted your monthly budget of KES 120,000 inclusive of tax and requested start date of 16 November 2026 for three months, subject to confirming scope and availability. A costed proposal will follow our assessment.

Kindly confirm the number, sizes and heights of the windows, safe access arrangements, and a suitable time for a site assessment.

RFQ checklist

Citation numbers below are recorded labels. Inspect the original source passage before relying on a claim.

Requirement	Mandatory / optional	Deadline & format	Citation & section
2.1 Business Registration	Mandatory	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.1) [citations 1]
2.2 Tax Compliance Cert.	Mandatory	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.2) [citations 1]
2.3 Two Past References	Mandatory (last 24 mos)	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.3) [citations 1]
2.4 Site Supervisor Info	Mandatory (name & role)	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.4) [citations 1]
2.5 Signed Quotation	Mandatory	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.5) [citations 1]
2.6 Method Statement	Mandatory (1 page)	Fri, 6 Nov 2026 at 12:00 noon EAT; 1 PDF	Section 2 (Item 2.6) [citations 2, 3]
Budget Ceiling	KES 120,000/mo max (Tax rate: Not specified in the source)	Final quote condition	Section 3 [citations 2]
Submission Details	Mandatory	Deadline: Fri, 6 Nov 2026, 12:00 noon EAT via Portal (1 PDF)	Section 4 [citations 2, 3]
Pre-bid Site Visit	Optional	Site Visit Date: Mon, 2 Nov 2026 at 10:00 AM EAT	Section 4 [citations 3]

Rejections & missing information

2. Explicit rejection grounds

Submissions will be automatically rejected only for the four grounds listed in Section 5:

Late submission: Proposal arrives after the 6 November 12:00 noon EAT deadline [Section 5.1] [3].

Missing submission item: Omission of any mandatory Section 2 item [Section 5.2] [3].

Unsigned quotation: Submission of an unsigned quote [Section 5.3] [3].

Budget ceiling breach: Quote exceeds KES 120,000 monthly total [Section 5.4] [3].

3. Before Quoting: Key Clarifications

Window Specifications: What are the exact number, dimensions, and height of windows, and is high-level external access equipment required? (Not specified in the source) [4, 5].

Clarification Process: What is the process and submission deadline for pre-bid queries? (Not specified in the source) [5].

Commercial & Operating Terms: What are the payment terms, insurance requirements, and minimum staffing levels? (Not specified in the source; insurance and minimum staffing are not mandatory bidding conditions) [5].

Note: Would you like me to draft a structured submission cover page and pricing table shell based on these requirements?

Observed missing-windows answer

The RFQ does not establish how many windows there are, what size they are, or whether your team can clean them safely from ground level [1, 2]. The document explicitly states that "the number, size and height of windows, and the need for external high-level access, have not yet been specified" [1] , and notes that bidders should clarify these details before finalising costs [2]. Draft Clarification Question: "Could you please specify the total count, dimensions, and heights of the windows to be cleaned, and confirm whether high-level external access equipment will be required?" Note: Would you like me to draft a complete formal email combining this with the other missing details (such as query deadlines and payment terms) to send to the procurement team?

30-day sales analysis

PRESENTER ANNOTATION

The model said it used Python. We independently reconciled the visible results, but did not inspect the execution trace. Do not treat that sentence alone as evidence of tool use.

Safi Services & Supplies - 30-Day Retail Sales Analysis

Currency: KES | Period: 30 days

The calculations were verified using Python, which is available. The business generated KES 179,640 in revenue and KES 30,295 in gross profit, representing a gross margin of approximately 16.86%.

Total revenue

KES 179,640

Cost of goods sold

KES 149,345

Gross profit

KES 30,295

Product	Revenue	COGS	Profit	Closing	Sell-through	Top-up
Multipurpose cleaner 2L	36,100	29,450	6,650	25	79.17%	70
Floor cleaner 5L	59,500	50,400	9,100	10	87.50%	60
Hand soap 1L	12,000	10,400	1,600	110	26.67%	0
Laundry soap bar	2,100	1,575	525	165	17.50%	0
Bleach 1L	18,480	14,960	3,520	12	88.00%	76
Microfibre pack	5,760	4,200	1,560	48	20.00%	0
Toilet paper 10 pack	36,900	31,160	5,740	8	91.11%	74
Bin liner box	8,800	7,200	1,600	32	20.00%	0
Total	179,640	149,345	30,295	410	-	280

The top-up column represents the additional units required to meet the next 30 days' assumed demand, after using available closing stock. It is not necessarily a recommended purchase order.

Rankings & worked examples

2. Highest gross-profit contributors

The top three are floor cleaner (KES 9,100), multipurpose cleaner (KES 6,650), and toilet paper (KES 5,740).

Together, they contribute KES 21,490, or approximately 70.94% of total gross profit. These products are particularly important to the business's current profitability.

3. Slow-moving products

Using the lowest sell-through percentage as the definition:

Rank	Product	Sell-through
1	Laundry soap bar	17.50%
2 (tie)	Microfibre pack	20.00%
2 (tie)	Bin liner box	20.00%

These are the bottom three products, with microfibre packs and bin liner boxes tied at 20%.

Low sell-through means a smaller proportion of opening stock was sold. It does not automatically mean the products are unprofitable or should be discontinued.

4. Formulas and worked calculations

For each product, let O be opening stock, S units sold, C unit cost, and P selling price.

Revenue = S × P
COGS = S × C
Gross profit = S × (P - C)
Closing stock = O - S
Sell-through = (S ÷ O) × 100
Top-up = max(0, S - (O - S))

Multipurpose cleaner 2L

Opening: 120 units | Sold: 95 | Cost: KES 310 | Price: KES 380

Revenue = 95 × 380 = KES 36,100 COGS = 95 × 310 = KES 29,450 Gross profit = 95 × (380 - 310) = KES 6,650 Closing stock = 120 - 95 = 25 units Sell-through = (95 ÷ 120) × 100 = 79.17% Top-up = max(0, 95 - 25) = 70 units

Floor cleaner 5L

Opening: 80 units | Sold: 70 | Cost: KES 720 | Price: KES 850

Revenue = 70 × 850 = KES 59,500 COGS = 70 × 720 = KES 50,400 Gross profit = 70 × (850 - 720) = KES 9,100 Closing stock = 80 - 70 = 10 units Sell-through = (70 ÷ 80) × 100 = 87.50% Top-up = max(0, 70 - 10) = 60 units

09 / ChatGPT stock response - continued

Actions & limitations

5. Recommended next actions

Prioritise replenishment: Under the stated assumptions, top up bleach (76 units), toilet paper (74), multipurpose cleaner (70), and floor cleaner (60).

Avoid unnecessary purchases: Hand soap, laundry soap, microfibre packs and bin liners already have enough closing stock to cover the next 30 days at the assumed demand.

Review slow movers: Investigate demand, pricing, shelf space and possible promotions before buying additional quantities.

Protect profitable products: Monitor the availability and gross-profit contribution of floor cleaner, multipurpose cleaner and toilet paper.

Validate purchasing assumptions: Confirm actual demand and supplier conditions before committing to orders.

6. Limitations and information required

Net profit cannot be determined because operating overheads are absent, including rent, salaries, utilities, transport, marketing and administration costs.

Before making a real purchasing decision, Safi Services & Supplies would also need actual sales trends and seasonality, supplier lead times, minimum order quantities, purchase prices and discounts, delivery costs, available cash, storage capacity, expiry dates where applicable, current inventory accuracy, and expected stockout risk.

The simplified analysis assumes no restocking, returns, shrinkage, price changes or stockouts, with identical demand over the next 30 days, instant delivery and zero safety stock.

Owner's takeaway: The business is generating positive gross profit, but profitability is concentrated in three products. Under the stated assumptions, a total top-up of 280 units covers the next 30 days' demand without adding unnecessary stock.
